## Description

The 3rd International Workshop on Hexagonal SiGe and related materials will take place on **27-28 October 2025** at the International Conference Center of **Sorbonne Université in Paris, France**. The key objective of this interdisciplinary workshop is to identify challenges towards a fundamental understanding of the main properties of hexagonal silicon and related materials. This will be the third edition of a series of workshops on the physics, chemistry and applications of group IV hexagonal materials after the two successful previous editions in Eindhoven (2023) and Milan (2024). By bringing the most recent experimental and theoretical viewpoints together, we aim to cover the following topics:

- Growth of Hex-SiGe nanowires.
- Planar growth of Hex-SiGe and integration on silicon.
- Characterization of structural, electronic, and optical properties of Hex-SiGe.
- Defects in Hex-SiGe.
- First principles calculations of Hex-SiGe electronic properties.
- Modeling of Hex-SiGe structural and functional properties.
- Pressure-induced phase transitions: towards Hex-SiGe.
- Towards Hex-SiGe-based devices.
- III-Vs, II-VIs and related materials.
